APPEAL BRIEF

COMMISSIONER FOR PATENTS
ALEXANDRIA, VIRGINIA 22313

SIR:

Appellants submit this brief in response to the Final Rejection dated October 22,
2003.

REAL PARTY IN INTEREST

The real party in interest herein is L'Oréal S.A. of Paris, France.

05/24/2004 JADD01 00000040 09903769

01 FC:1402 330.00 OP

RELATED APPEALS AND INTERFERENCES

Real party in interest L'Oréal S.A. filed an Appeal Brief in connection with U.S.
patent application serial no. 09/903,785 on May 17, 2004. This application may be related to
the present application.

STATUS OF CLAIMS

Claims 1-4 and 6-29 are pending, although claims 17-20 have been withdrawn from consideration. Because withdrawn method claims 17-20 depend from claim 1, Appellants respectfully request that these claims be reinstated in the present application and considered on appeal.

STATUS OF AMENDMENTS

All amendments and remarks filed in this case have been entered and considered.

SUMMARY OF INVENTION

The invention relates to compositions containing, in a physiologically acceptable medium, (1) at least one foaming surfactant, (2) 1-15 % by weight of at least one hydrophobic silica, and (3) at least one oxyalkylenated compound. (Specification at page 3, lines 9-13 and page 5, line 2). In the invention compositions, the oxyalkylenated compound is a thickening agent. (Specification at page 3, lines 16-20). Furthermore, the invention compositions contain at least 35 % by weight of water. (Specification at page 4, lines 5-9).

The invention also relates to methods of using the invention compositions to cleanse skin and/or hair, to remove make-up, to treat greasy skin, and/or to disinfect skin. (Specification at page 20, line 17 through page 21, line 12).

ISSUE

1. Whether Claims 1-4, 6-13, 16, 21, 22, 23, 25 and 27-29 Are Anticipated By Uemura.
2. Whether The Pending Claims Are Obvious Over Glenn.

GROUPING OF CLAIMS

The claims do not stand or fall together. Each claim stands individually, and in the argument section provided below Appellants explain why the claims are each separately patentable, one from the other.

ARGUMENT

The invention compositions require the presence of (1) at least one foaming surfactant, (2) 1-15 % by weight of at least one hydrophobic silica, and (3) at least one oxyalkylenated compound. Together, these required compounds allow the preparation of foaming products having unique viscosity characteristics. Specifically, synergism between the hydrophobic silica and the oxyalkylenated compound allows the invention compositions to be unexpectedly and surprisingly thick.

As demonstrated in comparative examples 1 and 2 set forth on page 22 of the present specification, the presence of an oxyalkylenated compound yields a composition having a viscosity of 59 poises, while the presence of hydrophobic silica yields a composition having a viscosity of 1-100 centipoises. Based on the thickness of these compositions, one would

expect a composition having both of these compounds to have a viscosity of no more than 60 poises.

However, as demonstrated in invention example 1 on page 22, the invention composition having both of these compounds actually has a thickness of 97 poises, approximately 65% greater thickness than would have been expected based on the thickness of the individual comparative examples. Thus, the invention compositions represent an unexpected advance in the art.

Regarding the §102 rejection, Uemura's example 7 does not contain a hydrophobic silica or a foaming surfactant. Accordingly, this rejection is improper.

In an attempt to support the § 102 rejection, the Examiner relies upon the unsupported beliefs that the silica in Uemura's example 7 is inherently hydrophobic and that Appellants have the burden of proving that such silica is hydrophilic to overcome this rejection. These beliefs are wrong.

First, it cannot be assumed that the silica in Uemura's example 7 is hydrophobic. Silica is not inherently hydrophobic. Rather, it is generally hydrophilic (but can be modified so that it is hydrophobic).¹ Silica is usually desiccant. Because Uemura does not expressly state that the silica in his example 7 is modified so as to be hydrophobic, it does not necessarily follow that Uemura's silica is hydrophobic. Indeed, given that silica is hydrophilic unless modified, it is more likely that Uemura's silica is hydrophilic. Because it does not necessarily follow that the silica in Uemura's example 7 is hydrophobic, example 7

¹ See, U.S. patents 5,843,407 (col. 5, lines 60-62) and 4,119,712 (col. 1, lines 39-42) submitted with Appellants' January 22, 2004, Request for Reconsideration.

does not inherently contain hydrophobic silica, making §102 rejection improper. *See, Eli Lilly & Co. v. Barr Laboratories, Inc.*, 251 F.3d 955 (Fed. Cir. 2001)(inherent anticipation requires that the claimed invention **necessarily result** from the prior art disclosure).

Second, to the extent Appellants have any burden of proof on this issue, it is not the burden of proving that example 7's silica is hydrophilic. Rather, Appellants need only demonstrate that the silica in example 7 is not **necessarily** hydrophobic (that is, that the silica is not inherently hydrophobic) to overcome the rejection. Appellants have satisfied this burden. The only evidence of record, which was submitted by Appellants,² demonstrates that silica is generally hydrophilic unless modified, and that Uemura does not indicate that example 7's silica has been modified in any way.

Similarly, the Examiner relies upon the mistaken belief that Uemura's example 7 contains a foaming surfactant to support the §102 rejection. However, the ethoxylated castor oil in example 7 is not a foaming surfactant.³ The Examiner has not presented any evidence to the contrary. Moreover, the glycerol derivative in example 7 (1-hexyl-3-undecamethylhexasiloxane propynyl glycerol) is an "oil component" for combination with Uemura's polymers, not a foaming surfactant. (See, Uemura (B1 version) at page 3, line 57 through page 4, line 10). Again, the Examiner has not presented any evidence to the contrary,

² See footnote 1.

³ See Tab A which is the International Cosmetic Ingredient Dictionary and Handbook's entry for PEG-40 hydrogenated castor oil. The Dictionary identifies PEG-40 hydrogenated castor oil as an **emulsifying** surfactant, not a cleansing surfactant.

See also, Tabs B and C which are the Dictionary's listings for cleansing and emulsifying surfactants, respectively. Again, PEG-40 hydrogenated castor oil is identified as an emulsifying surfactant, not a cleansing surfactant.

Because foaming surfactants are cleansing surfactants, not emulsifying surfactants, it follows that PEG-40

only unsupported assertions. Thus, Uemura does not contain a foaming surfactant either, making the §102 rejection improper for this reason as well.

Regarding the §103 rejections based on the Glenn references (collectively referred to as "Glenn"), Glenn must motivate or suggest to one skilled in the art to combine all three required ingredients into a single composition for the invention compositions to be *prima facie* obvious under 35 U.S.C. §103. Glenn, however, does not provide the necessary suggestion or motivation. In particular, Glenn does not teach or suggest adding an oxyalkylenated **thickening agent** to his compositions. Accordingly, Glenn does not teach or suggest the invention compositions or methods.

Glenn does not disclose or suggest adding oxyalkylenated thickening agents to his compositions. For oxyalkylenated compounds to be thickening agents, they must have a substantial degree of oxyalkylation. (See, pages 6-12 of the present specification). Glenn neither teaches nor suggests such compounds. Rather, Glenn discloses oxyalkenylated compounds suitable for use in his compositions as humectants, solutes and surfactants. Given the purpose for which Glenn includes such compounds in his compositions, these compounds are not going to have a substantial degree of oxyalkylation, which means that they will not be thickening agents. This is particularly true in view of the fact that Glenn's compositions are liquid.

In support of the § 103 rejections, the Examiner asserts that Glenn's disclosing the use of polyethylene glycol as a humectant/solute discloses the use of polyethylene glycol as a thickening agent. This assertion overlooks the fact that the present application discloses the

hydrogenated castor oil is not a foaming surfactant.

use of polyethylene glycols which are not thickening agents as humectants/solutes (see, page 19, line 12) as well as the use of different polyethylene glycols as thickening agents (see, page 7, line 10 et seq.). Clearly, polyethylene glycols which are not thickening agents differ from those which are thickening agents in the context of the present invention, so Glenn's disclosure of those which are not thickening agents cannot disclose or suggest the required thickening agents.

The significance of the requirement that the required oxyalkylenated compounds be thickening agents is demonstrated by the examples in the present specification. Comparative example 2 (page 22) does not contain PEG-120 methylglucose dioleate, an oxyalkylenated thickening agent, but it does contain two of Glenn's acceptable solutes/humectants, sorbitol and glycerol. (See, Glenn at col. 13, lines 14-15). This composition has a viscosity of 1-100 centipoises. Thus, compositions containing only Glenn's solutes/humectants result in unacceptable, non-viscous products. However, when thickening agent PEG-120 methylglucose dioleate is added, the resulting composition is substantially more viscous, having a viscosity of 97 poises. (Example 1, page 22). Thus, adding the claimed oxyalkylenated compound in a composition thickening effective amount results in a product having superior, more desirable properties, whereas adding Glenn's solutes/humectants does not.

Even assuming that a *prima facie* case of obviousness has been established – which is not the case – the unexpected viscosity properties associated with the invention compositions set out earlier in this argument are sufficient to rebut such a hypothetical case of *prima facie* obviousness.

In view of the above, Appellants respectfully submit that the present claims are in condition for allowance, and that the pending rejection should be REVERSED.

Each dependent claim similarly points out and describes a patentable invention neither disclosed nor suggested by the applied prior art. These claims themselves are separately patentable.

Claim 2 is a composition claim further requiring the presence of 35-95% water. Both Uemura and Glenn neither teach nor suggest compositions having a foaming surfactant, 1-15% hydrophobic silica, an oxyalkylenated compounds and 35-95% water, nor do they recognize or suggest any benefits associated with such compositions.

Claims 3 and 29, each separately patentable, are composition claims which further requires the composition to have specific viscosity properties. Nowhere does Uemura or Glenn describe or allude to compositions having such characteristics, or to any benefits resulting from a composition having such viscosity properties.

Claims 4 and 23-26, each separately patentable, further require the presence of specific amounts of hydrophobic silica. Uemura and Glenn neither teach nor suggest compositions having a foaming surfactant, the amounts of hydrophobic silica specified by these claims, and an oxyalkylenated compound, nor do they recognize or suggest any benefits associated with such compositions.

Claims 6 and 7, each separately patentable, are composition claims further requiring the presence of specific hydrophobic silicas. Uemura and Glenn neither teach nor suggest compositions having a foaming surfactant, the hydrophobic silicas specified in these claims,

and an oxyalkylenated compound, nor do they recognize or suggest any benefits associated with such compositions.

Claim 8 is a composition claim further requiring the presence of 1-20% oxyalkylenated compound. Uemura and Glenn neither teach nor suggest compositions having a foaming surfactant, a hydrophobic silica, and 1-20% oxyalkylenated compound, nor do they recognize or suggest any benefits associated with such compositions.

Claims 9-11, 22 and 27-28, each separately patentable, are composition claims requiring the presence of specific oxyalkylenated thickening compounds. Uemura and Glenn neither teach nor suggest compositions having a foaming surfactant, a hydrophobic silica, and the oxyalkylenated compounds specified in these claims, nor do they recognize or suggest any benefits associated with such compositions.

Claims 12, 14 and 15, each separately patentable, are composition claims further requiring the presence of specific surfactants. Uemura and Glenn neither teach nor suggest compositions having the foaming surfactants specified in the claims, a hydrophobic silica, and an oxyalkylenated compound, nor do they recognize or suggest any benefits associated with such compositions.

Claim 13 is a composition claim further requiring the presence of 2-50% foaming surfactant. Uemura and Glenn neither teach nor suggest compositions having 2-50% foaming surfactant, a hydrophobic silica, and an oxyalkylenated compound, nor do they recognize or suggest any benefits associated with such compositions.

Claim 16 is a composition claim further requiring the presence of specific solvents. Uemura and Glenn neither teach nor suggest compositions having a foaming surfactant, 1-

15% hydrophobic silica, an oxyalkylenated compound and the solvents specified in this claim, nor do they recognize or suggest any benefits associated with such compositions.

Claims 17-20, each separately patentable, are method claims further requiring use of the invention compositions to cleanse skin and/or hair, to remove make-up, to treat greasy skin, and/or to disinfect skin, respectively. Nowhere do Uemura or Glenn describe or allude to using compositions having a foaming surfactant, 1-15% hydrophobic silica, and an oxyalkylenated compound for such purposes, or to any benefits resulting from such use of such compositions.

Claim 21 is a composition claim which further requires the composition to be a face mask. Nowhere do Uemura and Glenn describe or allude to compositions having a foaming surfactant, 1-15% hydrophobic silica, and an oxyalkylenated compound applied as a face mask, or to any benefits resulting from such a face mask.

Application No. 09/903,769

Response to Final Rejection dated October 22, 2003

Accordingly, in view of the above remarks and reasons explaining the patentable distinctness of the presently appealed claims over the applied prior art, Appellants request that the Examiner's rejections all be REVERSED.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,
MAIER & NEUSTADT, P.C.

APPENDIX

Claim 1 (Previously Presented): A cleansing composition, comprising:

(1) at least one foaming surfactant, (2) at least one hydrophobic silica and (3) at least one oxyalkylenated compound thickening agent in a physiologically acceptable aqueous medium comprising at least 35% by weight of water relative to the total weight of the composition, wherein the amount of hydrophobic silica ranges from 1% to 15% on an active material weight basis relative to the total weight of the composition.

Claim 2 (Original): The composition of Claim 1, which comprises from 35% to 95% by weight of water relative to the total weight of the composition.

Claim 3 (Original): The composition of Claim 1, which has a viscosity ranging from 7 to 20 Pa·s.

Claim 4 (Previously Presented): The composition of Claim 22, wherein the amount of silica(s) is at least 1% on an active material weight basis relative to the total weight of the composition.

Claim 5 (Canceled).

Claim 6 (Original): The composition of Claim 1, wherein the hydrophobic silica is selected from the group consisting of amorphous silicas of pyrogenic origin.

Claim 7 (Original): The composition of Claim 1, wherein the hydrophobic silica is selected from the group consisting of silicas having a specific surface ranging from 50 to 500 m²/g, a number-average particle size ranging from 3 to 50 nm and a compacted density ranging from 40 to 200 g/l.

Claim 8 (Original): The composition of Claim 1, wherein the amount of oxyalkylenated compound ranges from 1% to 20% on an active material weight basis relative to the total weight of the composition.

Claim 9 (Previously Presented): The composition of Claim 1, wherein the oxyalkylenated compound is selected from the group consisting of polyethylene glycols, polyethylene glycol esters, polypropylene glycol esters, polyethylene glycol ethers, polypropylene glycol ethers, alkoxyated alkyl derivatives of polyols, oxyalkylenated triesters of glycerol, oxyalkylenated triesters of fatty acids, ethoxyethylenated urethane derivatives modified with alkyl chains, and mixtures thereof.

Claim 10 (Original): The composition of Claim 9, wherein the polyethylene glycol esters have the formula:

wherein $0 < m \leq 300$ and $0 \leq n \leq 300$ and $m + n \geq 6$, R and R' represent, independently of each other, hydrogen or a saturated or unsaturated, linear or branched, hydroxylated or non-hydroxylated alkyl chain containing from 1 to 30 carbon atoms, or an aryl chain, with the proviso that R and R' are not simultaneously hydrogen.

Claim 11 (Original): The composition of Claim 9, wherein the polyethylene glycol ethers and/or polypropylene glycol ethers have the formula:

in which $0 \leq m \leq 300$ and $0 \leq n \leq 300$ and $m + n \geq 6$, R and R' represent, independently of each other, hydrogen or a saturated or unsaturated, linear or branched, hydroxylated or non-hydroxylated alkyl chain containing from 1 to 30 carbon atoms, or an aryl chain, with the proviso that R and R' are not simultaneously hydrogen.

Claim 12 (Original): The composition of Claim 1, wherein the foaming surfactant is selected from the group consisting of nonionic surfactants, anionic surfactants, amphoteric surfactants and zwitterionic surfactants, and mixtures thereof.

Claim 13 (Original): The composition of Claim 1, wherein the amount of foaming surfactant ranges from 2% to 50% on an active material weight basis relative to the total weight of the composition.

Claim 14 (Original): The composition of Claim 1, wherein the foaming surfactant is selected from the group consisting of alkyl polyglucosides, maltose esters, polyglycerolated fatty alcohols, glucamine derivatives, carboxylates, amino acid derivatives, alkyl sulfates, alkyl ether sulfates, sulfonates, isethionates, taurates, sulfosuccinates, alkyl sulfoacetates, phosphates and alkyl phosphates, polypeptides, anionic alkyl polyglucoside derivatives, fatty acid soaps, betaines, N-alkylamidobetaines and derivatives thereof, glycine derivatives, sultaines, alkyl polyaminocarboxylates and alkylamphoacetates, and mixtures thereof.

Claim 15 (Original): The composition of Claim 12, wherein the foaming surfactant is selected from the group consisting of an anionic surfactant which is an acylsarcosinate, an oxyethylenated alkyl ether sulfate, an N-aryl N-methyltaurate, an N-acylglutamate, an acylisethionate, an sulfosuccinate, a phosphate or an alkyl phosphate; a polypeptide or a soap; an amphoteric or zwitterionic surfactant which is a betaine or an alkylamphoacetate; a nonionic surfactant which is an alkyl polyglucoside, O-octanoyl-6'-D-maltose, O-dodecanoyl-6'-D-maltose, polyglycerolated dodecanediol (3.5 mole of glycerol) and 2-ethylhexyloxycarbonyl-N-methylglucamine; and mixtures of these surfactants.

Claim 16 (Original): The composition of Claim 1, which further comprises at least one solvent selected from the group consisting of alcohols comprising from 1 to 6 carbon atoms and polyols, and mixtures thereof.

Claim 17 (Original): A method of treating the skin, the eyes, the scalp and/or the hair, comprising:

applying the composition of Claim 1 to the skin, the eyes, the scalp and/or the hair thereby cleansing and/or removing make-up from the skin, the eyes, the scalp and/or the hair.

Claim 18 (Original): A method of treating greasy skin, comprising:

applying the composition of Claim 1 to the skin, thereby removing grease from the skin.

Claim 19 (Original): A method of disinfecting the skin and/or the scalp, comprising:

applying the composition of Claim 1 to the skin and/or the scalp, thereby disinfecting the skin and/or the scalp.

Claim 20 (Original): A method of cleansing the skin, the eyes, the scalp and/or the hair, comprising:

applying the composition of Claim 1 to the skin, the eyes, the scalp and/or the hair in the presence of water thereby forming a lather; and

removing the lather containing soiling residues by rinsing the lather from the skin, the eyes, the scalp and/or the hair with water.

Claim 21 (Original): A cosmetic mask, comprising:

an applied composition of Claim 1 as a mask on the skin of the face.

Claim 22 (Previously Presented): A cleansing composition, comprising:

(1) at least one foaming surfactant, (2) at least one hydrophobic silica and (3) at least one oxyalkylenated compound in a physiologically acceptable aqueous medium comprising at least 35% by weight of water relative to the total weight of the composition, wherein the oxyalkylenated compound is a thickening agent selected from the group consisting of polyethylene glycols, polyethylene glycol esters, polypropylene glycol esters, polyethylene glycol ethers, polypropylene glycol ethers, alkoxyated alkyl derivatives of polyols, oxyalkylenated triesters of glycerol, oxyalkylenated triesters of fatty acids, ethoxyethylenated urethane derivatives modified with alkyl chains, and mixtures thereof.

Claim 23 (Previously Presented): The composition of Claim 1, wherein the amount of hydrophobic silica ranges from 2% to 10% on an active material weight basis relative to the total weight of the composition.

Claim 24 (Previously Presented): The composition of Claim 23, wherein the amount of hydrophobic silica ranges from 2% to 6% on an active material weight basis relative to the total weight of the composition.

Claim 25 (Previously Presented): The composition of Claim 4, wherein the amount of hydrophobic silica ranges from 2% to 10% on an active material weight basis relative to the total weight of the composition.

Claim 26 (Previously Presented): The composition of Claim 25, wherein the amount of hydrophobic silica ranges from 2% to 6% on an active material weight basis relative to the total weight of the composition.

Claim 27 (Previously Presented): The composition of Claim 22, wherein the polyethylene glycol esters have the formula:

wherein $0 < m \leq 300$ and $0 \leq n \leq 300$ and $m + n \geq 6$, R and R' represent, independently of each other, hydrogen or a saturated or unsaturated, linear or branched, hydroxylated or non-hydroxylated alkyl chain containing from 1 to 30 carbon atoms, or an aryl chain, with the proviso that R and R' are not simultaneously hydrogen.

Claim 28 (Previously Presented): The composition of Claim 22, wherein the polyethylene glycol ethers and/or polypropylene glycol ethers have the formula:

in which $0 \leq m \leq 300$ and $0 \leq n \leq 300$ and $m + n \geq 6$, R and R' represent, independently of each other, hydrogen or a saturated or unsaturated, linear or branched, hydroxylated or non-hydroxylated alkyl chain containing from 1 to 30 carbon atoms, or an aryl chain, with the proviso that R and R' are not simultaneously hydrogen.

Claim 29 (Previously Presented): The composition of Claim 1, which has a viscosity ranging from 9 to 15 Pa·s.

Chemical Classes: Alkoxyated Alcohols; Glycerol Esters and Derivatives

Functions: Surfactant - Cleansing Agent; Surfactant - Solubilizing Agent

Technical Names:

Polyethylene Glycol (54) Hydrogenated Castor Oil
Polyoxyethylene (54) Hydrogenated Castor Oil

Trade Name:

Arlatone 289 (ICI Surfactants)

PEG-55 HYDROGENATED CASTOR OIL

CAS Number: 61788-85-0 (generic)

Definition: PEG-55 Hydrogenated Castor Oil is a polyethylene glycol derivative of Hydrogenated Castor Oil (q.v.) with an average of 55 moles of ethylene oxide.

Information Sources: 21CFR177.2800

Chemical Classes: Alkoxyated Alcohols; Glycerol Esters and Derivatives

Functions: Surfactant - Cleansing Agent; Surfactant - Solubilizing Agent

Technical Names:

Polyethylene Glycol (55) Hydrogenated Castor Oil
Polyoxyethylene (55) Hydrogenated Castor Oil

PEG-60 HYDROGENATED CASTOR OIL

CAS Number: 61788-85-0 (generic)

Definition: PEG-60 Hydrogenated Castor Oil is a polyethylene glycol derivative of Hydrogenated Castor Oil (q.v.) with an average of 60 moles of ethylene oxide.

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.

frequently classified, on the basis of their ionic characteristics, as amphoteric, anionic, cationic, or nonionic. In cosmetics, surfactants perform a variety of important functions and are subdivided here into six major groups:

Surfactants - Cleansing Agents
 Surfactants - Emulsifying Agents
 Surfactants - Foam Boosters
 Surfactants - Hydrotropes
 Surfactants - Solubilizing Agents
 Surfactants - Suspending Agents

In addition, some surfactants function as *Hair Conditioning Agents*, and some are included in the listing of *Skin-Conditioning Agents - Miscellaneous*. In order to avoid unnecessary repetition, no comprehensive listing of surfactants is provided. Instead, surfactants are listed on the basis of their common usage in the above functional classifications. It should be understood that individual surfactants may be used for other functions in addition to this classification.

Surfactants - Cleansing Agents

Surfactants - Cleansing Agents, are used for skin and hair-cleaning purposes and as emulsifiers in cosmetics. In this function, surfactants wet body surfaces, emulsify or solubilize oils, and suspend soil. It is characteristic (and expected by some consumers) that such agents should contribute foaming and lathering properties to cleansing products and bubble baths. The listing includes not only soaps but also fatty acids which yield soaps upon reaction with an alkali.

Surfactants - Cleansing Agents are routinely used as emulsifiers.

Almondamidopropylamine Oxide
 Almondamidopropyl Betaine
 Aminopropyl Laurylglutamine
 Ammonium C12-15 Alkyl Sulfate

Surfactants - Cleansing Agents (Cont.)

Ceteareth-80	DEA-C12-13 Alkyl Sulfate	Disodium Coco-Glucoside Sulfosuccinate
Ceteareth-100	DEA-C12-15 Alkyl Sulfate	Disodium Cocoyl Butyl Gluceth-10 Sulfosuccinate
Ceteareth-25 Carboxylic Acid	DEA-Ceteareth-2 Phosphate	Disodium Cocoyl Glutamate
Ceteareth-2 Phosphate	DEA-Cetyl Sulfate	Disodium C12-15 Pareth Sulfosuccinate
Ceteareth-4 Phosphate	DEA-Cocoamphodipropionate	Disodium Deceth-5 Sulfosuccinate
Ceteareth-5 Phosphate	DEA-C12-13 Pareth-3 Sulfate	Disodium Deceth-6 Sulfosuccinate
Ceteareth-10 Phosphate	DEA-Cyclocarboxypropyloleate	Disodium Decyl Phenyl Ether Disulfonate
Ceteth-20	DEA-Dodecylbenzenesulfonate	Disodium Dihydroxyethyl
Ceteth-24	DEA-Isostearate	Sulfosuccinylundecylenate
Ceteth-25	DEA-Laureth Sulfate	Disodium Dimethicone Copolyol Sulfosuccinate
Ceteth-30	DEA-Lauryl Sulfate	Disodium Hydrogenated Cottonseed Glyceride
Ceteth-45	DEA-Linoleate	Sulfosuccinate
Ceteth-8 Phosphate	DEA-Methyl Myristate Sulfonate	Disodium Hydrogenated Tallow Glutamate
Ceteth-10 Phosphate	DEA-Myreth Sulfate	Disodium Hydroxydecyl Sorbitol Citrate
Cetoleth-22	DEA-Myristate	Disodium Isodecyl Sulfosuccinate
Cetoleth-24	DEA-Myristyl Sulfate	Disodium Isostearamido MEA-Sulfosuccinate
Cetoleth-25	DEA-Oleth-5 Phosphate	Disodium Isostearamido MIPA-Sulfosuccinate
Cetyl Betaine	DEA-Oleth-20 Phosphate	Disodium Isostearoamphodiacetate
Cocamidoethyl Betaine	Deceth-7 Carboxylic Acid	Disodium Isostearoamphodipropionate
Cocamidopropyl Amine Oxide	Deceth-7 Glucoside	Disodium Isostearyl Sulfosuccinate
Cocamidopropylamine Oxide	Decylamine Oxide	Disodium Laneth-5 Sulfosuccinate
Cocamidopropyl Betaine	Decyl Betaine	Disodium Lauramido MEA-Sulfosuccinate
Cocamidopropyl Hydroxysultaine	Decyl Glucoside	Disodium Lauramido PEG-2 Sulfosuccinate
Cocamine Oxide	Decyltetradeceth-30	Disodium Lauramido PEG-5 Sulfosuccinate
Cocaminobutyric Acid	Decyltetradecylamine Oxide	Disodium Laureth-5 Carboxyamphodiacetate
Cocaminopropionic Acid	Diammonium Lauramido-MEA Sulfosuccinate	Disodium Laureth-7 Citrate
Coceth-7 Carboxylic Acid	Diammonium Lauryl Sulfosuccinate	Disodium Laureth Sulfosuccinate
Coceth-4 Glucoside	Diammonium Oleamido PEG-2 Sulfosuccinate	Disodium Laureth-6 Sulfosuccinate
Cocoamphodipropionic Acid	Di-C12-15 Pareth-2 Phosphate	Disodium Laureth-9 Sulfosuccinate
Cocobetainamido Amphopropionate	Di-C12-15 Pareth-4 Phosphate	Disodium Laureth-12 Sulfosuccinate
Coco-Betaine	Di-C12-15 Pareth-6 Phosphate	Disodium Lauriminodipropionate
Coco-Glucoside	Di-C12-15 Pareth-8 Phosphate	Disodium Lauroamphodiacetate
Coco-Hydroxysultaine	Di-C12-15 Pareth-10 Phosphate	Disodium Lauroamphodipropionate
Coco-Morpholine Oxide	Diethylamine Laureth Sulfate	Disodium Lauryl Phenyl Ether Disulfonate
Coconut Acid	Dihydroxyethyl C8-10 Alkoxypropylamine Oxide	Disodium Lauryl Sulfosuccinate
Coco/Oleamidopropyl Betaine	Dihydroxyethyl C9-11 Alkoxypropylamine Oxide	Disodium Myristamido MEA-Sulfosuccinate
Coco-Sultaine	Dihydroxyethyl C12-15 Alkoxypropylamine Oxide	Disodium Nonoxynol-10 Sulfosuccinate
Cocoyl Glutamic Acid	Dihydroxyethyl Cocamine Oxide	Disodium Oleamido MEA-Sulfosuccinate
Cocoyl Hydrolyzed Collagen	Dihydroxyethyl Lauramine Oxide	Disodium Oleamido MIPA-Sulfosuccinate
Cocoyl Hydrolyzed Keratin	Dihydroxyethyl Stearamine Oxide	Disodium Oleamido PEG-2 Sulfosuccinate
Cocoyl Hydrolyzed Soy Protein	Dihydroxyethyl Tallowamine Oxide	Disodium Oleoamphodipropionate
Cocoyl Sarcosine	Dimethicone Copolyol Phosphate	Disodium Oleth-3 Sulfosuccinate
Corn Acid	Dimethicone Propyl PG-Betaine	Disodium Oleyl Phosphate
Cottonseed Acid	Dimyristyl Phosphate	Disodium Oleyl Sulfosuccinate
C11-15 Pareth-30	Diocetyl Sodium Sulfosuccinate	Disodium Palmitamido PEG-2 Sulfosuccinate
C11-15 Pareth-40	Dioleoylamidoethyl Hydroxyethylmonium	Disodium Palmitoleamido PEG-2 Sulfosuccinate
C12-13 Pareth-23	Methosulfate	Disodium PEG-4 Cocamido MIPA-Sulfosuccinate
C20-40 Pareth-40	DIPA-Hydrogenated Cocoate	Disodium PEG-8 Palm Glycerides Sulfosuccinate
C22-24 Pareth-33	DIPA-Lanolate	Disodium PPG-2-Isodeceth-7
C30-50 Pareth-40	Disodium Caproamphodiacetate	Carboxyamphodiacetate
C9-11 Pareth-6 Carboxylic Acid	Disodium Caproamphodipropionate	Disodium Ricinoleamido MEA-Sulfosuccinate
C11-15 Pareth-7 Carboxylic Acid	Disodium Capryloamphodiacetate	Disodium Sitostereth-14 Sulfosuccinate
C12-13 Pareth-5 Carboxylic Acid	Disodium Capryloamphodipropionate	Disodium Stearamido MEA-Sulfosuccinate
C12-13 Pareth-8 Carboxylic Acid	Disodium Cetearyl Sulfosuccinate	Disodium Steariminodipropionate
C12-13 Pareth-12 Carboxylic Acid	Disodium Cetyl Phenyl Ether Disulfonate	Disodium Stearoamphodiacetate
C12-15 Pareth-7 Carboxylic Acid	Disodium Cocamido MEA-Sulfosuccinate	Disodium Stearoyl Glutamate
C12-15 Pareth-8 Carboxylic Acid	Disodium Cocamido MIPA-Sulfosuccinate	Disodium Stearyl Sulfosuccinamate
C14-15 Pareth-8 Carboxylic Acid	Disodium Cocamido PEG-3 Sulfosuccinate	Disodium Stearyl Sulfosuccinate
C12-13 Pareth-10 Phosphate	Disodium	Disodium 2-Sulfolaurate
C12-15 Pareth-8 Phosphate	Cocoamphocarboxyethylhydroxypropylsulfonate	Disodium Tallamido MEA-Sulfosuccinate
C12-15 Pareth-10 Phosphate	Disodium Cocoamphodiacetate	Disodium Tallowamido MEA-Sulfosuccinate
C12-16 Pareth-6 Phosphate	Disodium Cocoamphodipropionate	Disodium Tallowamphodiacetate

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.

Disodium Tallowiminodipropionate	Laureth-40	Milkamidopropyl Betaine
Disodium Tallow Sulfosuccinamate	Laureth-3 Carboxylic Acid	Minkamidopropylamine Oxide
Disodium Tridecylsulfosuccinate	Laureth-4 Carboxylic Acid	Minkamidopropyl Betaine
Disodium Undecylenamido MEA-Sulfosuccinate	Laureth-5 Carboxylic Acid	MIPA C12-15 Pareth Sulfate
Disodium Undecylenamido PEG-2 Sulfosuccinate	Laureth-6 Carboxylic Acid	MIPA-Dodecylbenzenesulfonate
Disodium Wheat Germamido MEA-Sulfosuccinate	Laureth-10 Carboxylic Acid	MIPA-Laureth Sulfate
Disodium Wheat Germamido PEG-2 Sulfosuccinate	Laureth-11 Carboxylic Acid	MIPA-Lauryl Sulfate
Disodium Wheat Germamphodiacetate	Laureth-12 Carboxylic Acid	Mixed Isopropanolamines Lanolate
Di-TEA-Oleamido PEG-2 Sulfosuccinate	Laureth-13 Carboxylic Acid	Mixed Isopropanolamines Lauryl Sulfate
Di-TEA-Palmitoyl Aspartate	Laureth-14 Carboxylic Acid	Mixed Isopropanolamines Myristate
Ditridecyl Sodium Sulfosuccinate	Laureth-17 Carboxylic Acid	Morpholine Oleate
Dodecylbenzene Sulfonic Acid	Laureth-6 Citrate	Morpholine Stearate
Erucamidopropyl Hydroxysultaine	Laureth-7 Citrate	Myreth-3 Carboxylic Acid
Ethyl PEG-15 Cocamine Sulfate	Laureth-3 Phosphate	Myreth-5 Carboxylic Acid
Hexyldecanol Acid	Laureth-4 Phosphate	Myristalkonium Chloride
Hydrogenated Coconut Acid	Laureth-7 Phosphate	Myristamidopropylamine Oxide
Hydrogenated Laneth-25	Laureth-8 Phosphate	Myristamidopropyl Betaine
Hydrogenated Menhaden Acid	Laureth-7 Tartrate	Myristamidopropyl Dimethylamine Phosphate
Hydrogenated Palm Acid	Lauric Acid	Myristamine Oxide
Hydrogenated Palm Kernel Amine Oxide	Lauroamphodipropionic Acid	Myristaminopropionic Acid
Hydrogenated Tallow Acid	Lauroyl Collagen Amino Acids	Myristic Acid
Hydrogenated Tallowamine Oxide	Lauroyl Hydrolyzed Collagen	Myristoyl Glutamic Acid
Hydrogenated Tallow Betaine	Lauroyl Hydrolyzed Elastin	Myristoyl Hydrolyzed Collagen
Hydrogenated Talloweth-25	Lauroyl Methyl Glucamide	Myristoyl Sarcosine
Hydrogenated Tallowyl Glutamic Acid	Lauroyl Sarcosine	Myristyl Betaine
Hydroxyceteth-60	Lauroyl Silk Amino Acids	Myristyl/Cetyl Amine Oxide
Hydroxyethylbutylamine Laureth Sulfate	Lauryl Betaine	Nonoxynol-20
Hydroxyethyl Carboxymethyl Cocamidopropylamine	Lauryl Glucoside	Nonoxynol-23
Hydroxyethyl Hydroxypropyl C12-15 Alkoxypropylamine Oxide	Lauryl Hydroxysultaine	Nonoxynol-25
Hydroxystearic Acid	Lauryl Pyrrolidone	Nonoxynol-30
Isoceteth-30	Lauryl Sultaine	Nonoxynol-35
Isopropanolamine Lanolate	Linoleic Acid	Nonoxynol-40
Isopropylamine Dodecylbenzenesulfonate	Linolenic Acid	Nonoxynol-44
Isostearamidopropylamine Oxide	Linseed Acid	Nonoxynol-50
Isostearamidopropyl Betaine	Lysine Cocoate	Nonoxynol-100
Isostearamidopropyl Morpholine Oxide	Magnesium Coco-Sulfate	Nonoxynol-120
Isosteareth-22	Magnesium Laureth-11 Carboxylate	Nonoxynol-5 Carboxylic Acid
Isosteareth-50	Magnesium Laureth Sulfate	Nonoxynol-8 Carboxylic Acid
Isostearic Acid	Magnesium Laureth-5 Sulfate	Nonoxynol-10 Carboxylic Acid
Isostearyl Hydrolyzed Collagen	Magnesium Laureth-8 Sulfate	Nonoxynol-6 Phosphate
Jajoba Wax PEG-80 Esters	Magnesium Laureth-16 Sulfate	Nonoxynol-9 Phosphate
Jajoba Wax PEG-120 Esters	Magnesium Lauryl Hydroxypropyl Sulfonate	Nonoxynol-10 Phosphate
Laneth-20	Magnesium Lauryl Sulfate	Nonyl Nonoxynol-49
Laneth-25	Magnesium Methyl Cocoyl Taurate	Nonyl Nonoxynol-100
Laneth-40	Magnesium Myreth Sulfate	Nonyl Nonoxynol-150
Laneth-50	Magnesium Oleth Sulfate	Nonyl Nonoxynol-7 Phosphate
Laneth-60	Magnesium/TEA-Coco-Sulfate	Nonyl Nonoxynol-9 Phosphate
Laneth-75	MEA-Laureth-6 Carboxylate	Nonyl Nonoxynol-10 Phosphate
Lanolin Acid	MEA-Laureth Sulfate	Nonyl Nonoxynol-15 Phosphate
Lauramidopropylamine Oxide	MEA-Lauryl Sulfate	Nonyl Nonoxynol-24 Phosphate
Lauramidopropyl Betaine	MEA-PPG-6-Laureth-6-Carboxylate	Octeth-3 Carboxylic Acid
Lauramine Oxide	MEA-PPG-8-Steareth-7 Carboxylate	Octoxynol-16
Lauraminopropionic Acid	MEA-Undecylenate	Octoxynol-25
Laureth-16	Meroxapol 108	Octoxynol-30
Laureth-20	Meroxapol 174	Octoxynol-33
Laureth-23	Meroxapol 178	Octoxynol-40
Laureth-25	Meroxapol 254	Octoxynol-70
Laureth-30	Meroxapol 255	Octoxynol-20 Carboxylic Acid
	Meroxapol 258	Octyldodeceth-20
	Meroxapol 314	Octyldodeceth-25
	Methyl Morpholine Oxide	Octyldodeceth-30
	Milkamidopropyl Amine Oxide	Oleamidopropylamine Oxide

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.

PPG-36-Buteth-36	Sodium Cocoyl Hydrolyzed Rice Protein	Sodium Laureth-12 Sulfate
PPG-38-Buteth-37	Sodium Cocoyl Hydrolyzed Soy Protein	Sodium Laureth-7 Tartrate
PPG-10 Cetyl Ether Phosphate	Sodium Cocoyl Hydrolyzed Wheat Protein	Sodium Lauriminodipropionate
PPG-3-Deceth-2 Carboxylic Acid	Sodium Cocoyl Isethionate	Sodium Lauroamphoacetate
PPG-20-Glycereth-30	Sodium Cocoyl Sarcosinate	Sodium Lauroamphohydroxypropylsulfonate
Propyltrimonium Hydrolyzed Collagen	Sodium Cocoyl Taurate	Sodium Lauroampho PG-Acetate Phosphate
Quaternium-24	Sodium C12-14 Olefin Sulfonate	Sodium Lauroamphopropionate
Quaternium-52	Sodium C14-16 Olefin Sulfonate	Sodium Lauroyl Aspartate
Rapeseed Acid	Sodium C14-18 Olefin Sulfonate	Sodium Lauroyl Collagen Amino Acids
		Sodium Lauroyl Hydrolyzed Collagen

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.

Surfactants - Cleansing Agents (Cont.)

Sodium Lauroyl Hydrolyzed Silk	Sodium Ricinoleoamphoacetate	Steareth-40
Sodium Lauroyl Isethionate	Sodium Soyate	Steareth-50
Sodium Lauroyl Methylaminopropionate	Sodium Soy Hydrolyzed Collagen	Steareth-80
Sodium Lauroyl Oat Amino Acids	Sodium Stearate	Steareth-100
Sodium Lauroyl Sarcosinate	Sodium Stearoamphoacetate	Steareth-2 Phosphate
Sodium Lauroyl Silk Amino Acids	Sodium Stearoamphohydroxypropylsulfonate	Stearic Acid
Sodium Lauroyl Taurate	Sodium Stearoamphopropionate	Stearoyl Glutamic Acid
Sodium Lauroyl Wheat Amino Acids	Sodium Stearoyl Casein	Stearoyl Sarcosine
Sodium Lauryl Phosphate	Sodium Stearoyl Glutamate	Stearyl Betaine
Sodium Lauryl Sulfate	Sodium Stearoyl Hyaluronate	Sulfated Castor Oil
Sodium Lauryl Sulfoacetate	Sodium Stearoyl Hydrolyzed Collagen	Sulfated Glyceryl Oleate
Sodium Linoleate	Sodium Stearoyl Hydrolyzed Corn Protein	Sulfated Olive Oil
Sodium/MEA Laureth-2 Sulfosuccinate	Sodium Stearoyl Hydrolyzed Silk	Sulfated Peanut Oil
Sodium Methyl Cocoyl Taurate	Sodium Stearoyl Hydrolyzed Soy Protein	Sunflower Seed Acid
Sodium Methyl Lauroyl Taurate	Sodium Stearoyl Hydrolyzed Wheat Protein	Tall Oil Acid
Sodium Methyl Myristoyl Taurate	Sodium Stearoyl Lactalbumin	Tallow Acid
Sodium Methyl Oleoyl Taurate	Sodium Stearoyl Oat Protein	Tallowamidopropylamine Oxide
Sodium Methyl Palmitoyl Taurate	Sodium Stearoyl Pea Protein	Tallowamidopropyl Betaine
Sodium Methyl Stearoyl Taurate	Sodium Stearyl Sulfate	Tallowamidopropyl Hydroxysultaine
Sodium Methyl 2-Sulfolaurate	Sodium Tallamphopropionate	Tallowamine Oxide
Sodium Myreth Sulfate	Sodium Tallowamphoacetate	Tallow Betaine
Sodium Myristate	Sodium Tallowate	Tallow Dihydroxyethyl Betaine
Sodium Myristoamphoacetate	Sodium Tallow Sulfate	Tallowoyl Ethyl Glucoside
Sodium Myristoyl Glutamate	Sodium/TEA-Lauroyl Collagen Amino Acids	TEA-Abietoyl Hydrolyzed Collagen
Sodium Myristoyl Hydrolyzed Collagen	Sodium/TEA-Lauroyl Hydrolyzed Collagen	TEA-C10-15 Alkyl Sulfate
Sodium Myristoyl Isethionate	Sodium/TEA-Lauroyl Hydrolyzed Keratin	TEA-C12-13 Alkyl Sulfate
Sodium Myristoyl Sarcosinate	Sodium/TEA-Lauroyl Keratin Amino Acids	TEA-C12-14 Alkyl Sulfate
Sodium Myristyl Sulfate	Sodium/TEA-Undecylenoyl Collagen Amino Acids	TEA-C12-15 Alkyl Sulfate
Sodium Nonoxynol-6 Phosphate	Sodium/TEA-Undecylenoyl Hydrolyzed Collagen	TEA-Canolate
Sodium Nonoxynol-9 Phosphate	Sodium/TEA-Undecylenoyl Hydrolyzed Corn Protein	TEA-Cocoate
Sodium Nonoxynol-1 Sulfate	Sodium/TEA-Undecylenoyl Hydrolyzed Soy Protein	TEA-Coco-Sulfate
Sodium Nonoxynol-3 Sulfate	Sodium/TEA-Undecylenoyl Hydrolyzed Wheat Protein	TEA-Cocoyl Glutamate
Sodium Nonoxynol-4 Sulfate	Sodium Trideceth-3 Carboxylate	TEA-Cocoyl Hydrolyzed Collagen
Sodium Nonoxynol-6 Sulfate	Sodium Trideceth-6 Carboxylate	TEA-Cocoyl Hydrolyzed Soy Protein
Sodium Nonoxynol-8 Sulfate	Sodium Trideceth-7 Carboxylate	TEA-Cocoyl Sarcosinate
Sodium Nonoxynol-10 Sulfate	Sodium Trideceth-8 Carboxylate	TEA-Dodecylbenzenesulfonate
Sodium Nonoxynol-25 Sulfate	Sodium Trideceth-12 Carboxylate	TEA-Hydrogenated Tallowoyl Glutamate
Sodium Octoxynol-2 Ethane Sulfonate	Sodium Trideceth Sulfate	TEA-Isostearate
Sodium Octoxynol-2 Sulfate	Sodium Tridecylbenzenesulfonate	TEA-Isostearoyl Hydrolyzed Collagen
Sodium Octoxynol-6 Sulfate	Sodium Tridecyl Sulfate	TEA-Lauraminopropionate
Sodium Octoxynol-9 Sulfate	Sodium Undeceth-5 Carboxylate	TEA-Laurate
Sodium Oleate	Sodium Undecylenate	TEA-Laureth Sulfate
Sodium Oleoamphoacetate	Sodium Undecylenoamphoacetate	TEA-Lauroyl Collagen Amino Acids
Sodium Oleoamphohydroxypropylsulfonate	Sodium Undecylenoamphopropionate	TEA-Lauroyl Glutamate
Sodium Oleoamphopropionate	Sodium Wheat Germamphoacetate	TEA-Lauroyl Hydrolyzed Collagen
Sodium Oleoyl Hydrolyzed Collagen	Soy Acid	TEA-Lauroyl Keratin Amino Acids
Sodium Oleoyl Isethionate	Soyamidopropylamine Oxide	TEA-Lauroyl Methylaminopropionate
Sodium Oleth Sulfate	Soyamidopropyl Betaine	TEA-Lauroyl Sarcosinate
Sodium Oleyl Sulfate	Stearamidopropylamine Oxide	TEA-Lauryl Sulfate
Sodium Olivete	Stearamidopropyl Betaine	TEA-Myristaminopropionate
Sodium Palmate	Stearamine Oxide	TEA-Myristate
Sodium Palmitate	Steareth-15	TEA-Myristoyl Hydrolyzed Collagen
Sodium Palmitoyl Hydrolyzed Collagen	Steareth-16	TEA-Oleate
Sodium Palmitoyl Hydrolyzed Wheat Protein	Steareth-20	TEA-Oleoyl Hydrolyzed Collagen
Sodium Palm Kernelate	Steareth-21	TEA-Oleoyl Sarcosinate
Sodium Peanutate	Steareth-25	TEA-Oleyl Sulfate
Sodium PEG-6 Cocamide Carboxylate	Steareth-27	TEA-Palmitate
Sodium PEG-8 Cocamide Carboxylate	Steareth-30	TEA-Palm Kernel Sarcosinate
Sodium PEG-3 Lauramide Carboxylate		TEA-PEG-3 Cocamide Sulfate
Sodium PEG-4 Lauramide Carboxylate		TEA-Rosinate
Sodium Rapeseedate		TEA-Stearate
Sodium Ricinoleate		TEA-Tallate

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.

Surfactants - Cleansing Agents (Cont.)

TEA-Tridecylbenzenesulfonate
TEA-Undecylenate
TEA-Undecylenoyl Hydrolyzed Collagen
Tetramethyl Decynediol
Tetrasodium Dicarboxyethyl Stearyl Sulfosuccinamate
TIPA-Laureth Sulfate
TIPA-Lauryl Sulfate
TIPA-Stearate
Trideceth-20
Trideceth-50

Trideceth-3 Carboxylic Acid
Trideceth-4 Carboxylic Acid
Trideceth-7 Carboxylic Acid
Trideceth-15 Carboxylic Acid
Trideceth-19 Carboxylic Acid
Trideceth-10 Phosphate
Tridecylbenzenesulfonic Acid
Trisodium Lauroampho PG-Acetate Chloride Phosphate
Undecanoic Acid
Undeceth-5 Carboxylic Acid

Surfactants - Emulsifying Agents

Undecylenamidopropylamine Oxide
Undecylenamidopropyl Betaine
Undecylenic Acid
Undecylenoyl Collagen Amino Acids
Undecylenoyl Hydrolyzed Collagen
Undecylenoyl Wheat Amino Acids
Undecyl Glucoside
Wheat Germ Acid
Wheat Germamidopropylamine Oxide
Wheat Germamidopropyl Betaine

Surfactants - Emulsifying Agents

Surfactants - Emulsifying Agents, are employed in cosmetics to prepare emulsions. The efficacy of emulsifying agents depends on their ability to reduce surface tension, to form complex films on the surface of emulsified droplets, and to create a repulsive barrier on emulsified droplets to prevent their coalescence. *Emulsion Stabilizers* and *Viscosity-Increasing Agents* can be used as auxiliary emulsifiers to facilitate the process of emulsification or to retard physical changes in emulsions throughout their shelf-life. Ingredients listed as *Surfactants - Cleansing Agents* also function as emulsifying agents, but are not included in the following listing.

The following listing generally includes *Surfactants - Cleansing Agents*. Surfactant-type cleansers are widely used as emulsifiers; they are excluded here only to reduce unnecessary duplication.

Abletic Acid
Almond Oil PEG-6 Esters
Ammonium Coco-Sulfate
Apricot Kernel Oil PEG-6 Esters
Arachideth-20
Avocado Oil PEG-11 Esters
Beeswax
Beeswax Acid
Beheneth-5
Beheneth-10
Beheneth-20
Butylglucoside Caprate
Butyloctanoic Acid
C18-36 Acid Glycol Ester
C12-20 Acid PEG-8 Ester
Calcium Stearoyl Lactylate
C9-16 Alkanes/Cycloalkanes
C9-15 Alkyl Phosphate
Canola Oil Glyceride
Capryleth-4
Caprylic/Capric Triglyceride PEG-4 Esters

Sodium Laureth Sulfate	Steareth-15	Trideceth-6 Phosphate
Sodium Lauroyl Lactylate	Steareth-16	Trideceth-10 Phosphate
Sodium Lauryl Phosphate	Steareth-20	Triisostearin PEG-6 Esters
Sodium Linoleate	Steareth-21	Trilaneth-4 Phosphate
Sodium/MEA Laureth-2 Sulfosuccinate	Stearic Acid	Trilaureth-4 Phosphate
Sodium Myreth Sulfate	Stearoyl Inulin	Triolein PEG-6 Esters
Sodium Myristate	Stearoyl Lactylic Acid	Trioleth-8 Phosphate
Sodium Oleate	Stearoyl Leucine	Undecanoic Acid
Sodium Oleoyl Lactylate	Stearyl Alcohol	Undeceth-3
Sodium Oleth-7 Phosphate	Sucrose Cocoate	Undeceth-5
Sodium Oleth-8 Phosphate	Sucrose Dilaurate	Undeceth-7

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.

Undeceth-9
Undecyleneth-6

Undecylenic Acid
Vegetable Glycerides Phosphate

Wheat Germ Acid

Surfactants - Foam Boosters

Surfactants - Foam Boosters, are used in cosmetics to increase the foaming capacity of *Surfactants - Cleansing Agents*, or to stabilize foams in general. Foam boosters are substances which increase the surface viscosity of the liquid which surrounds the individual bubbles in a foam. These agents are commonly used in shaving soaps, shampoos, bubble baths, liquid soaps, mousses, or aerosol-dispensed foams. *Film Formers* or *Viscosity-Increasing Agents* are sometimes used as foam boosters. The listing below is generally limited to foam boosters which can also be classified as surfactants.

Wheat Germamidopropylamine Oxide
Wheat Germamidopropyl Betaine

Surfactants - Hydrotropes

Surfactant - Hydrotropes are surfactants which have the ability to enhance the water solubility of another surfactant. Prominent members of this group are short chain alkyl aryl sulfonates, sulfosuccinates, and some nonionic surfactants.

The inclusion of any compound in the *Dictionary and Handbook* does not indicate that use of that substance as a cosmetic ingredient complies with the laws and regulations governing such use in the United States or any other country.
